It is an honor to have been chosen to design the Charles and Ray Eames stamp pane. My father, designer and architect Eliot Noyes, was a colleague and good friend of the Eameses. Like Charles and Ray, who were creative partners as well as husband and wife, my father believed that modern design is not so much a fixed style as it is an approach to life, that well-designed things can bring joy and delight into mundane living.

Although they are best known for their furniture, Charles and Ray set trends and made innovations in many other areas, including architecture, children's toys, fabric design, and short films. During their remarkable 50-year career together, they introduced the American public to new and less expensive materials, like fiberglass and plastic, and created some of the most memorable – and always useful – designs of the 20th century.

In designing a stamp pane celebrating the work of Charles and Ray Eames, my challenge was to capture in 16 images the full spectrum of their inspired and wide-ranging body of work. I have tried to break free from the standard stamp pane template and to create – in the Eameses's spirit – a modern, aesthetically balanced sheet of stamps that evokes the fresh and playful character of the Eameses's philosophy and work. My idea was to balance images of furniture with film, line drawings with photographs, and color and typography with just the right amount of serendipity. The solution is colorful and graphic. It pairs images of just a few of the hundreds of items and ideas that the Eameses developed with simple, elegant typography and just the right amount of white space.

Charles and Ray Eames were champions of the modern design cause, and their work continues to attract new fans. It is as fresh and inspired today as it was when they first created it. It is a pleasure to help celebrate their remarkable contribution to American design.

Since 1775, the U.S. Postal Service has connected friends, families, neighbors and businesses by mail. It is an independent federal agency that visits 140 million homes and businesses every day and is the only service provider to deliver to every address in the nation. The Postal Service receives no taxpayer dollars for routine operations, but derives its operating revenues solely from the sale of postage, products and services. With annual revenues of more than \$66 billion, it is the world's leading provider of mail and delivery services, offering some of the most affordable postage rates in the world. The Postal Service delivers more than 43 percent of the world's mail volume—some 203 billion letters, advertisements, periodicals and packages a year—and serves 7 million customers each day at its 38,000 retail locations nationwide.

Ol' Blue Eyes, bylines and a bygone era

A | American Journalists

The U.S. Postal Service honors five journalists who reported, often at great personal sacrifice, some of the most important stories of the 20th century. Designer Fred Otnes created the abstract stamp backgrounds meant to imply the "worldliness" of the subjects without referring to specific events.

The Year of the Rat stamp is the first of 12 stamps in the new **Celebrating Lunar New Year** series. This stamp, illustrated by Kam Mak, features lanterns (red for luck), which are common decorations at Lunar New Year celebrations. Ethel Kessler, who art directed the stamp, also chose elements from the previous **Lunar New Year** stamps — the paper-cut design of a rat and the Chinese character for "rat," drawn in grass-style calligraphy.

The 13th stamp in the *Legends of Hollywood* series pays homage to James Stewart — the American film star whose lanky physique and naturalistic acting style gave him a “real” quality that audiences loved. B Polar Lights

Polar lights (or auroras) are the result of magnetic storms and take different visual forms resembling arcs, curtains and rays. During magnetic storms, energetic electrons descend from space and collide with molecules in the upper atmosphere, leading to the emission of green and sometimes red light. Today, the aurora is the subject of scientific investigation, with researchers from many countries collaborating during International Polar Year 2007-2008.
